- A. Dissipative Document Wallets are rigid dissipative, low charging antistatic document vinyl wallets with self-adhesive backing are designed for use within ESD Protected Areas (EPA). Unprotected documents could hold electrostatic charges that may cause damage to electrostatic sensitive devices (ESDS).
- B. The pouches are made of clear vinyl film that is low-charging and dissipative, which means that electrostatic charges will be removed to ground when handled by a grounded operator or placed on a grounded working surface
- C. The products contain antistatic additives that bloom to the surface of the film. They meet or exceed the requirements for surface resistance of EN 61340-5-1 and Packaging standard IEC 61340-5-3.
- D. The pouches use an adhesive that will not leave a residue on most surfaces. Density is 0.99 to 1.02g/ccm. Auto-ignition temperature is above 250°C.
- E. The pouches have thumb holes and no markings.
