

FRONT OF BOX

FEATURES:

- Eliminates workstation clutter
- Made from an extruded conductive polypropylene plastic material, making it ideal to properly set up and standardize any ESD workstation.
- Contains twelve cells that can be used for various items which are used on the workstation, such as MENDA dispensing bottles, lotion, flux bottles, solder spools, cutters, tweezers, wash bottles and various other workbench accessories
- The front of the workstation organizer is cut low for quick and easy access to smaller items placed in the front cells.
- Closes securely which keeps contents clean and makes it portable

35876 Workstation Organizer, Box Only, 12 cells

"It should be understood that any object, item, material or person could be a source of static electricity in the work environment. Removal of unnecessary nonconductors, replacing nonconductive materials with dissipative or conductive materials and grounding all conductors are the principle methods of controlling static electricity in the workplace, regardless of the activity." (ESD Handbook ESD TR20.20 section 2.4 Sources of Static Electricity)
