

Dual-Wire Dual-Operator Programmable Monitor Installation, Operation and Maintenance

Made in the United States of America

Figure 1. EMIT Dual-Wire Dual-Operator Programmable Monitor

Description

The patented* EMIT Dual-Wire Dual-Operator Programmable Monitor monitors two operators and two ESD worksurfaces eliminating the need for periodic testing and record keeping of wrist straps. The Dual-Wire Dual-Operator Programmable Monitor uses low-voltage steady state DC continuous-loop technology to continuously monitor (versus pulsed or intermittent) dual-wire wrist strap functionality. Independent audio and visual alarm conditions make it easy to identify the status of the worksurfaces and operators. Two operator remotes with 10 foot cables are included for use at adjacent workstations. Each monitor is calibrated with accepted procedures and standards traceable to the National Institute of Standards and Technology (NIST) and includes a NIST certificate.

ANSI/ESD S20.20 section 7.3 states “Compliance verification records shall be established and maintained to provide evidence of conformity to the technical requirements.” Per ANSI/ESD S1.1 Annex A.3 Daily (wrist strap system) testing may be omitted if constant monitoring used.” Per ESD Handbook ESD TR 20.20 section 5.3.2.4.4 “Typical Test programs recommend that wrist straps that are used daily should be tested daily. However, if the products that are being produced are of such value that knowledge of a continuous, reliable ground is needed, and then continuous monitoring should be considered or even required.”

The EMIT Dual-Wire Dual-Operator Programmable Monitor is available in the following models:

Item	Power Adapter
50515	None
50522	N. America

Packaging

- 1 Dual-Wire Dual-Operator Programmable Monitor
- 2 Desco [19690](#) Dual-Wire Elastic Wrist Straps
- 1 Power Adapter, 12VDC, N. America (50522 only)
- 2 Operator Remotes with Attached Cables (1 black, 1 white)
- 2 Mat Monitor Cords (1 black, 1 white)
- 2 Mat Ground Cords (green and yellow)
- 1 Monitor Ground Cord (green and yellow)
- 1 Universal Snap Kit
- 1 Certificate of Calibration

Features and Components

Figure 2. Dual-Wire Dual-Operator Programmable Monitor features and components

*U.S. Patents 6,052,053 and 6,205,408

A. Operator 1 Status LEDs: When the green LED is illuminated, operator 1 is properly grounded. When the LED is illuminated red or yellow and the alarm sounds, operator 1 is not properly grounded.

B. Worksurface 1 Status LEDs: When the green LED is illuminated, worksurface 1 is properly grounded. When the red LED is illuminated and the alarm sounds, worksurface 1 is not properly grounded.

C. Operator 2 Status LEDs: When the green LED is illuminated, operator 2 is properly grounded. When the LED is illuminated red or yellow and the alarm sounds, operator 2 is not properly grounded.

D. Worksurface 2 Status LEDs: When the green LED is illuminated, worksurface 2 is properly grounded. When the LED is illuminated red and the alarm sounds, worksurface 2 is not properly grounded.

E. Power Jack: Connect to the included 12VDC power adapter.

F. Operator 2 Remote Jack: Connect to the black operator remote cable.

G. Operator 1 Remote Jack: Connect to the white operator remote cable.

H. Monitored Mat 1 Terminal: Monitors a worksurface mat for proper dissipative resistance and static charges. Connect the white mat monitor cord here.

I. Ground Terminal: Common ground point for the monitor. Connect to the green and yellow monitor ground cord.

J. Monitored Mat 2 Terminal: Monitors a worksurface mat for proper dissipative resistance and static charges. Connect the black monitor cord here.

K. Data Output: For manufacturer use.

L. Alarm Audible Adjustment: Turn the trimpot counter-clockwise to increase the audible alarm volume and clockwise to decrease it.

Installation

1. Determine the mounting location of the Dual-Wire Dual-Operator Monitor. The front panel should be visible to both operators.
2. Determine the mounting locations of the operator remotes. Be sure to install the remotes at a distance that enables the 10 foot leads to reach the back of the monitor.
3. Install tinned wire ends of the mat cords to their appropriate screw terminal block located at the back of the monitor.

4. Attach the worksurface mats to ground using the green mat ground cords. Install the ring terminal end of the cord to an appropriate ground point. Attach the snaps to the snaps on the worksurface mat.
5. Install the tinned wire end of the green and yellow monitor ground cord to the ground terminal located at the back of the monitor. Install its ring terminal to an appropriate ground point. Be sure to use a different ground point than the one used for the mats. The face plate screw of a grounded AC wall outlet may provide a convenient connection point.
6. Route the mat cords from the back of the monitor to the snaps on worksurface mats. The white cord is for worksurface mat #1. The black cord is for worksurface mat #2.
7. Insert the operator remote cables into their appropriate jacks located at the back of the monitor. The white cable is for operator #1. The black cable is for operator #2.
8. Connect the power adapter to the power jack located at the back of the monitor. Plug the power adapter into a proper AC power outlet. The monitor is now powered.

NOTE: Worksurface must have a conductive layer such as Dual Layer Rubber or Dissipative 3-Layer Vinyl or Micastat® Dissipative Laminate with conductive buried layers. EMIT Continuous Monitors are not recommended for use with homogeneous matting.

Figure 3. Installing the Dual-Wire Dual-Operator Programmable Monitor

Operation

1. Monitoring of the operators will remain in the STANDBY condition until a wrist cord is plugged into the operator remote. STANDBY mode is indicated by a blinking yellow operator LED.
2. Plug a wrist strap cord, not attached to the wristband, into the monitored jack labeled WRIST STRAP MONITOR located on the remote. This automatically activates the selected operator channel. The corresponding operator LED should illuminate red and the alarm should sound on the monitor.
3. Remove the charges from your body by making contact with a properly grounded ESD worksurface.
4. Snap the cord to the wristband, and fit it snugly onto your wrist. This should silence the audible alarm and cause the corresponding operator LED to switch from red to green. If this does not happen, examine the wrist cord for continuity or damage and your wrist band to ensure that it is securely fit. If you have dry skin, apply an approved dissipative hand lotion such as [Menda Reztore™ ESD Hand Lotion](#).
5. The AUX GND jack located on the operator remote is a grounded and unmonitored connection for guests. It must be used with a banana plug wrist cord and single-wire wristband.

Figure 4. Connecting a dual-wire wrist strap to the operator remote

SETTING THE OPERATOR TEST VOLTAGE AND TEST LIMIT

The Dual-Wire Dual-Operator Monitor's operator test voltage and high test limit can be set to different values. The operator test voltage can be set to either +5V or +8V, and the operator high test limit can be set to either 10 megohms or 35 megohms. The default voltage is +8V, and the default operator high test limit is 35 megohms. These settings are controlled by a set of 3 switches located inside the monitor's enclosure.

NOTE: EMIT recommends re-calibration of the monitor should either setting be changed. See the "Calibration" section for more information.

To gain access to these switches, remove the monitor's cover and position the monitor so the PCB matches the orientation shown in Figure 5. Switches SW1 and SW2 control the operator test voltage. Switch SW3 controls the operator high test limit.

Figure 5. Switches SW1, SW2 and SW3 inside the monitor's enclosure

Operator Test Voltage

+5V

SW1 Position: RIGHT
SW2 Position: LEFT

+8V

SW1 Position: LEFT
SW2 Position: RIGHT

Operator High Test Limit

10 megohms

SW3 Position: RIGHT

35 megohms

SW3 Position: LEFT

Calibration

Frequency of recalibration should be based on the critical nature of those ESD sensitive items handled and the risk of failure for the ESD protective equipment and materials. In general, EMIT recommends that calibration be performed annually.

Use the EMIT 50524 Limit Comparator for Dual-Wire Monitors to perform periodic testing (once every 6-12 months) of the Dual-Wire Dual-Operator Programmable Monitor. The Limit Comparator can be used on the shop floor within a few minutes virtually eliminating downtime, verifying that the monitor is operating within tolerances.

See [TB-6542](#) for more information.

NIST Calibration

EMIT provides a basic, National Institute of Standards and Technology (NIST) traceable calibration for the products that we manufacture. This is sometimes referred to as a Level 1 calibration.

For more on National Institute of Standards and Technology see:

<http://www.nist.gov/index.html>

For more information on the calibration that EMIT's provides for products that we manufacture see:

<http://emit.descoindustries.com/Calibration.aspx>

Specifications

Operating Voltage	12 VDC
Operating Temperature	32°F - 104°F (0 - 40°C)
Monitor Dimensions	4.4" x 4.7" x 2.1" (11.2cm x 11.9cm x 5.3cm)
Monitor Weight	1.1 lbs (0.5 kg)

TEST VOLTAGES

Operator	+8 V** or +5 V
Worksurface	200 mV

TEST LIMITS

Operator	Low Fail: < 1.72 megohms Pass: 2 - 9 megohms High Fail: > 11.5 megohms or Pass: 2 - 30 megohms** High Fail: > 40 megohms**
Worksurface	Pass: < 3.5 megohms Fail: > 3.8 megohms

**Default

Figure 7. Operator Remote dimensions

Replacement remotes are available as EMIT item numbers 50525 and 50526.
